WORK EXPERIENCE

Amotions Inc.

TX, USA

Forward Deployed Engineer

June 2025 - Present

- Shipped 5+ production AI coaching features for sales and customer-success teams by translating requirements from product, GTM, and enablement stakeholders into working LLM applications accelerating the platform's move from prototype to customer-facing production.
- Architected the RAG layer behind the AI coach's guidance, indexing customer playbooks, call transcripts, and coaching content with OpenAI embeddings and semantic search improving the relevance of in-call suggestions and post-call feedback.
- Live coaching suggestions drifted off-message and off-brand. Built prompt evaluation frameworks and guardrails into the real-time copilot (pre-call prep, live guidance, roleplay) in Python, TypeScript, Next.js, and React on OpenAI APIs, raising answer accuracy 28% and shipping features 25% faster
- Grounded the AI coach in each customer's own knowledge base, integrating LLMs with enterprise content systems across 10K+ documents so reps get answers drawn from their company's playbooks instead of generic advice.
- Reduced delays between customer statements and on-screen coaching by optimizing the live transcription, context-processing, and LLM inference pipeline, allowing representatives to receive actionable suggestions while the conversation was still relevant
- Built a RAG pipeline retrieving product details, playbooks, and objection handling from live conversation context, gating each suggestion through prompt validation, state checks, and regression tests before display

Accenture Pvt Ltd

India

DevOps Engineer

Feb 2022 - Jul 2023

- Deadline-bound policyholder letters failed under overnight batch volume. Rebuilt the correspondence platform on EKS, ECS, Lambda, and S3 with autoscaling and rolling releases, hitting 99.9% availability with zero-downtime template changes.
- Manual provisioning slowed releases and let Test drift from Production. Codified environments in Terraform and automated delivery through Jenkins, Code Pipeline, and Docker, cutting deployment cycles 40% across 200+ builds.
- PHI and policyholder PII moved through the pipeline unaudited. Segmented workloads into private VPC subnets and enforced least-privilege IAM, encryption, Secrets Manager, and CloudTrail, producing an audit trail for every letter delivered.
- Supported secure handling of policyholder information by configuring IAM roles, encrypted storage, controlled secrets, private network access, and audit logging in accordance with enterprise security and insurance compliance requirements.

GlobalStep Pvt Ltd

India

Associate Software Developer

Jul 2020 - Feb 2022

- Built APIs with Google Cloud Functions, automating data workflows and reducing manual effort by 40%. Data-ingestion reliability increase to 99.1% via schema-evolution tracking, anomaly triggers, and automated rollback handles.
- Implemented monitoring with CloudWatch, Prometheus, Grafana, SNS, and CloudTrail, reducing incident response time by 30%.
- Spearheaded React and JavaScript development, reducing time-to-market by 40% and onboarding time by 50%.
- Used Dynatrace and ServiceNow to cut issue detection by 30% and response time by 50% while meeting SLAs.

EDUCATION

University of Texas at Arlington

TX, USA

Master of Science in Computer Science

Graduation Date: May 2025

Pune University

India

Bachelor of Engineering in Computer Engineering

Graduation Date: Jul 2021

PROJECTS

Cloud Web App DevOps – GCP APIs(Machine Images, Cloud SQL, Cloud Storage), Mailgun, NameCheap

- Built a cloud-native user management service using Node.js, PostgreSQL, Pub/Sub, and Cloud Functions for email verification.
- Improved scalability with Managed Instance Groups, autoscaling, and load balancing, achieving 99% uptime.
- Secured GCP infrastructure using VPC, DNS, firewalls, IAM, and Terraform.
- Automated CI/CD with GitHub Actions and Packer, accelerating deployment cycles by 90%.

Clinical Doc AI Copilot – Python, RAG, LangChain, FAISS, FastAPI

- Built a Clinical Document AI Copilot using Python, LangChain, RAG, and FAISS for contextual medical document retrieval.
- Developed FastAPI services for document ingestion, semantic search, and LLM-powered clinical question answering.
- Optimized prompt engineering and retrieval pipelines to improve response accuracy, reduce hallucinations, and enable low-latency inference.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, Node.js, Shell Scripting (Bash)

AI & Machine Learning: LLMs, Generative AI, RAG, OpenAI API, LangChain, Prompt Engineering, AI Agents, Vector Embeddings, Semantic Search, FAISS, LLM Evaluation

Frontend & Backend: React.js, Next.js, FastAPI, Express.js, REST APIs, GraphQL, Microservices

Cloud & DevOps: AWS (EC2, EKS, ECS, Lambda, S3, RDS, IAM, VPC, API Gateway, CloudWatch)

Databases & Vector Stores: PostgreSQL, MySQL, Cloud SQL, FAISS

Monitoring & Observability: Prometheus, Grafana, Dynatrace, CloudWatch, CloudTrail, ServiceNow
