SUMMARY

Full Stack Developer with 5+ years of experience building high-performance web apps, APIs, and cloud-native services. Improved page load speed 38%, cut release cycles 30% through CI/CD automation, and reduced p95 latency by 45% via schema redesign and SQL tuning. Skilled in API design, data modeling, and container orchestration. Known for driving cross-team alignment and elevating code quality through reviews and mentoring.

SKILLS

Languages & Scripting: Java, JavaScript, Typescript, C++, SQL, Python

Frameworks: Spring Boot, React, Node.js, REST APIs, Microservices, dbt (beginner), Airflow (familiar)

Databases: MySQL, PostgreSQL, MongoDB, Firebase

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, GitHub Actions, Firebase Hosting, GitOps

Methods: Agile/Scrum, API Design, GitOps

Tools: JIRA, Stripe API, JWT, Postman, Linux, VSCode

WORK EXPERIENCE

Dell Technologies | USA | Texas | Full Stack Developer

May 2024 - Present

- Built customer-facing modules in **React** with **TypeScript/JavaScript** backed by **Java Spring Boot REST APIs**, lifting conversion by 11% and improving LCP by 38%.
- Orchestrated containerized **microservices on AWS EKS (Kubernetes)** using Docker, and engineered **automated CI/CD via GitHub Actions** cutting change lead time by 30%.
- Migrated reporting from **MySQL to PostgreSQL**; rewrote critical SQL using window functions and proper indexing, cutting p95 response from 420ms to 230ms.
- Optimized a **Node.js (Express) notification service** using backpressure, batching, and idempotent retries, reducing message lag by 54% at peak.
- Implemented cross-cloud backups **from AWS S3 to GCP Cloud Storage** with lifecycle/retention policies, achieving 99.95% restore success in drills.
- Standardized branching, reviews and sprint rituals, mentored juniors and aligned stakeholders, lowering merge defects 22% and raising on-time sprint delivery 9%.

Hexaware Technologies | India | Pune | Software Developer

Jul 2019 - Jul 2023

- Engineered microservices in Java/Spring Boot** exposing REST APIs, increasing order-processing throughput 19% while sustaining 99.9% availability.
- Architected a React + Node.js portal with typed interfaces, boosting SUS usability scores 17% and reducing front-end defects 28%.
- Constructed **MySQL schemas**, foreign keys, and stored routines; tuned SQL with composite indexes to raise reconciliation accuracy from 92% to 99%.
- Containerized workloads with Docker and orchestrated rollouts on Kubernetes (EKS), trimming infra costs 14% through autoscaling and right-sizing.
- Streamlined **CI/CD using GitHub Actions** and contract-first API design, accelerating cadence from biweekly to weekly with zero rollback incidents.
- Coordinated requirements workshops with product and QA to clarify acceptance criteria, reducing requirement churn 23% and stabilizing sprint velocity.

EDUCATION

Master of Science (MS) in Computer Science

University of Texas, Arlington, Texas, USA

May 2025

Coursework: Data Structures and Algorithms, Machine Learning, Artificial Intelligence, Distributed Systems, Web Data Management, Cloud-computing and Bigdata.

Bachelor of Computer Engineering

Savitribai Phule Pune University, Pune, India

May 2021

Coursework: Software Engineering, Networking, Database Systems, Algorithm & Data Structures

CERTIFICATIONS

- AWS Practitioner**
- AWS Associate Developer**
- NVIDIA AI Infrastructure and Operational Fundamentals**
- JAVA Full Stack Developer**
- Oracle Cloud Infrastructure Architect Associate**
- Linux: File Management for Devops**
- Azure Cloud Fundamentals**

PROJECTS

AI-POWERED RAG ASSISTANT FOR DEVOPS AUTOMATION

- Developed a **Retrieval-Augmented Generation (RAG)** assistant leveraging **OpenAI APIs** and enterprise knowledge bases to automate troubleshooting, release notes generation, and infrastructure Q&A.
- Enhanced Deployed **on Amazon EKS** with **Kubernetes** ensuring scalable and secure microservices communication.
- Integrated with **MCPs** (Model Context Protocols) to dynamically extend AI capabilities **into CI/CD** and monitoring workflows.

CLOUD-NATIVE AI SAAS DEPLOYMENT

- Deployed transformer-based NLP models as scalable microservices across **multi-cloud platforms (AWS + GCP)** with **GitOps** driven **Kubernetes** clusters.
- Designed AI inference endpoints secured via API Gateway and monitored with Datadog, achieving cost-optimized autoscaling under variable workloads.
- Experimented with **integrating Snowflake Intelligence** for real-time data insights feeding into **ML pipelines**, enhancing model accuracy and enabling advanced data-driven use cases.

MAVSMART | PERSONAL PROJECT

- Engineered a centralized React marketplace for 1,000+ students to replace fragmented WhatsApp trading, hosted on UTA.cloud with **Tailwind CSS for responsive UI**.
- Developed **Express.js backend with MongoDB**, reducing post-creation time by 50% via RESTful APIs.
- Secured user authentication via Firebase reducing 95% unauthorized access: deployed **backend on AWS EC2 with GitHub Actions CI/CD**, cutting deployment errors by 40%.

DINE DISCOVER | PERSONAL PROJECT

- Created a restaurant finder app **using PHP and Yelp API**, optimizing queries to handle 200+ requests/sec.
- Reduced SQL injection risks by 90% via prepared statements, maintaining 99.9% uptime for 500+ users.
